MysticAI

Wisdom from Sacred Texts — Powered by AI

Bhagavad Gita • Ramayana • Bible • Quran

PRODUCT VISION & STRATEGY DOCUMENT

Prepared by	Version	Year
Founder / Product Team	**v1.0 — Initial**	**2025**

01 Executive Summary

MysticAI is an AI-powered spiritual companion that helps users navigate life's challenges by drawing wisdom from the world's most revered sacred texts — starting with the **Bhagavad Gita** and expanding to the Ramayana, Bible, and Quran. Users type a question or describe a situation; MysticAI responds with relevant verses, grounded explanations, and real insight — always citing chapter and verse so every answer can be verified independently.

700+	1B+	4	2–3 wk
Gita Verses in v1 corpus	Hindi-speaking target users	Major religious traditions planned	Time to working MVP

Core Value Proposition

- Instant access to ancient wisdom in plain, modern language
- Every answer cites a real verse — no hallucinations, no invented shlokas
- Personal application: "I'm stressed about work" → Gita 2.47, explained for your situation
- Multi-lingual from day one: English + Hindi, with Sanskrit transliteration
- Extensible to all major world religions without restarting from scratch

02 Problem & Market Opportunity

The Problem

Hundreds of millions of people feel a deep connection to sacred texts like the Gita or Quran but lack the time, language skills, or scholarly background to extract practical guidance. Existing apps offer static reading — they don't answer your specific situation or help you apply the teaching to your life today.

Pain Point	Current Solutions	MysticAI's Answer
Hard to find a relevant verse for a life situation	Manual search, priests, Google	Semantic RAG retrieval in seconds
Sacred texts in Sanskrit / archaic English	Translation apps, commentary books	Plain-language explanations, always cited
Fear of misinterpretation	None — user is on their own	Descriptive tone + multiple scholarly views shown
No personalization	Static reading plans	Conversational, context-aware responses

Market Opportunity

1.4B	2.4B	1.9B	$4.2B
Hindus worldwide	Christians worldwide	Muslims worldwide	Religious app market 2024, growing 12% YoY

03 Product Vision & Features

Vision Statement

"To make the timeless wisdom of the world's sacred texts instantly accessible to every person — in their own language, applied to their own life — with complete transparency about the source."

Core Feature Set — v1

Feature	Description
Conversational Q&A	User describes a problem; MysticAI responds with relevant verses and a grounded explanation.
Verse Citation (always)	Every response includes chapter:verse (e.g. Gita 2.47). Hallucination guardrails built into the system prompt.
Sanskrit + Transliteration	Show original Devanagari script alongside IAST transliteration and a modern English translation.
Expandable Verse View	Tap any citation to see the full shloka, translation, and optional commentary tradition.
Multi-lingual UI	English and Hindi for v1; additional Indic languages in v2.
Feedback Loop	Thumbs up/down + "Was the citation correct?" — feeds continuous retrieval improvement.
Tone Guardrail	System-level rule: descriptive only ("Krishna says…"), never prescriptive ("you should…").

04 Technical Architecture

MysticAI is built on a **Retrieval-Augmented Generation (RAG)** architecture. This means the AI never "makes up" a verse — it first retrieves real, verified text from a curated database, then uses an LLM to explain it in context. This is non-negotiable for a domain where wrong answers cause religious offense.

Pipeline — Step by Step

Step	Component	Technology Options
1	Chat UI	Next.js / React Native
2	Query Embedding	OpenAI Ada / Anthropic Embeddings
3	Verse Retrieval	Chroma / Pinecone / pgvector (vector DB)
4	Prompt Construction	Python / LangChain RAG chain
5	LLM Generation	Claude API (claude-sonnet-4) — grounded answer
6	Response + Citation	FastAPI or Node.js backend → structured JSON

7	Feedback Collection	PostgreSQL + lightweight admin dashboard

Why RAG Matters for Sacred Texts

- **Hallucination is religiously offensive.** Inventing a shloka or misattributing a verse is not just factually wrong — it can deeply offend users and permanently destroy trust. RAG anchors every response to a verified, retrieved verse.
- **Auditability.** Users and scholars can always click to see the exact source verse, translation, and commentary tradition used.
- **Corpus control.** Each religious tradition gets its own curated, verified corpus — responses never mix traditions.

05 Development Roadmap

0

Phase 0 — Strategic Decisions

Duration: 1 week (no code)

- Lock v1 scope: Bhagavad Gita only (most Q&A-shaped; text)
- Select translation source: Gita Press / Swami Sivananda / Eknath Easwaran
- Set tone policy: descriptive ("Krishna says…"), never prescriptive ("you should…")
- Commentary stance: neutral summary for v1; multiple acharya lenses in v2
- Languages for v1: English + Hindi
- Identify a Sanskrit scholar / religious advisor for review

★ Milestone: All decisions documented and agreed before a single line of code is written.

1

Phase 1 — MVP Build

Duration: 2–3 weeks

- Ingest all 700 Gita verses into structured JSON (chapter, verse, Sanskrit, transliteration, translation, theme tags)
- Embed verses into vector DB (Chroma or pgvector)
- RAG pipeline: user query → retrieve top 3–5 verses → LLM answers grounded in them
- Simple chat UI in Next.js with verse citation display
- System prompt guardrails: always cite chapter:verse, never invent shlokas
- Test with 50 hand-crafted user questions across domains (anxiety, duty, grief, relationships)

★ Milestone: "I'm stressed about work" → returns Gita 2.47 + 6.5 with contextual explanation.

2

Phase 2 — Trust & Polish

Duration: 3–4 weeks

- Evaluation suite: 100 curated Q→verse pairs to catch retrieval regressions automatically
- Hindi language support (UI + responses)
- Sanskrit display in Devanagari with IAST transliteration toggle
- Expandable "Show full verse" with commentary options
- Feedback button: "Was this helpful?" / "Was the citation correct?"
- Auth, rate limiting, usage analytics, beta launch to 20–50 users

★ Milestone: Citation accuracy >95% on eval suite, NPS > 40 from beta users.

3

Phase 3 — Expand Hindu Corpus

Duration: 1–2 months

- Add Ramayana (chunked by Kanda/Sarga — narrative structure differs from Gita)
- Add major Upanishads: Brihadaranyaka, Chandogya, Mandukya
- Theme-based browsing: "verses about anger," "verses about duty," "verses about grief"
- Daily verse + personalized reflection feature
- Public launch of the Hindu-texts version

★ Milestone: Public v1.0 launched with Gita + Ramayana + Upanishads, 1,000+ active users.

4

Phase 4 — Cross-Religion Expansion

Duration: 3–6 months per tradition

- Bible: select canon (Protestant 66-book), pick translation (ESV/NIV), Old + New Testament
- Quran: Arabic text + trusted translation + tafsir (Ibn Kathir); Quran and hadith clearly separated
- Each tradition: its own corpus, system prompt, guardrails, and scholarly reviewer
- RTL UI support for Arabic; locale-appropriate formatting
- Scholar validation required before each tradition goes live

★ Milestone: Multi-faith platform supporting 3+ traditions, 10,000+ active users.

5

Phase 5 — Product Maturity

Duration: Ongoing

- Mobile app (React Native — iOS + Android)
- Voice input: accessibility for elderly users
- Audio recitation: essential for Quran, highly valued for Gita
- Personalized reflection journals and learning paths
- Scholar Q&A; marketplace (commission model)
- Monetization: free tier + premium (audio, deeper commentary, longer context)

★ Milestone: Sustainable product with 50,000+ users and institutional partnerships.

06 User Base & Personas

The Seekers (25–45, urban professionals)

Overwhelmed by modern life, wants guidance but no time to read full texts. Uses MysticAI like a personal spiritual advisor — types a problem, gets a verse and explanation.

The Students (18–25, college / early career)

Studying philosophy or Hindu texts, wants quick verse lookup and contextual understanding for exams or personal growth.

The Diaspora (25–60, Indians abroad)

Disconnected from cultural roots, uses the app to maintain connection to tradition in an accessible, modern format.

The Curious (Any age, any background)

Non-Hindu wanting to understand the Gita or explore comparative religion. Low commitment, high intellectual curiosity.

The Devout (40+, regular practitioners)

Already knows the texts well, uses MysticAI to explore interpretations, compare acharya views, and find specific verses quickly.

Geographic Priority

Market	Priority	Rationale
India — Hindi belt	P0 Launch	Largest Hindi-speaking population; strong cultural demand for Gita content; rapidly growing smartphone penetration
Indian diaspora (US, UK, UAE, Canada)	P1 Early	Higher disposable income; English-comfortable; willing to pay for premium features
Southeast Asia	P2 Phase 4	Large Muslim population for Quran module; Hindu minorities in Bali and Malaysia
Middle East	P2 Phase 4	Quran module; Arabic RTL UI required; large devout user base
Western markets (US, Europe)	P3 Phase 5	Bible module; comparative religion interest; highest average revenue per user

07 Business Model & Monetization

Free Tier Forever free

- 20 questions per day
- Bhagavad Gita + Ramayana access
- English language only
- Basic verse citations

Premium — ■199/month (~$2.40) Core paid tier

- Unlimited questions
- All religious traditions
- English + Hindi
- Audio recitation
- Deeper commentary (multiple acharya lenses)
- Personal reflection journal

Scholar — ■999/month (~$12) Power users & researchers

- Everything in Premium
- Sanskrit analysis tools
- Commentary comparison: Shankara vs Ramanuja vs Madhva
- API access for researchers and developers
- Priority support

Additional Revenue Streams

- **Institutional licensing:** Schools, temples, churches, mosques — white-label or API access
- **Publisher partnerships:** Co-branded content with Gita Press, Penguin Classics, Islamic Foundation
- **Scholar marketplace:** Connect users with verified religious scholars for deeper questions (commission model)
- **Grants & CSR:** Religious education grants from Indian government; CSR budgets of large Indian corporations

08 Risks & Mitigation

Risk	Level	Mitigation Strategy
Religious offense via hallucination	HIGH	RAG architecture prevents invented verses. All outputs cite chapter:verse. Descriptive tone enforced. Scholar review before each corpus launch.
Interpretation controversy	MEDIUM	Clearly label commentary stance. Offer multiple scholarly lenses in v2. Avoid ruling or fatwa language absolutely.
Data / copyright issues	MEDIUM	Use only public-domain translations (pre-1928) or properly licensed texts. Document provenance for every source text.
LLM API cost at scale	MEDIUM	Cache frequent queries. Use smaller models for retrieval, larger only for generation. Free tier is rate-limited.
Cross-religion community backlash	LOW	Each tradition launches separately after independent scholar validation. Traditions are never mixed in one response.
Regulatory risk (India IT Act)	LOW	Legal review before launch. Content policy drafted with counsel. No political or sectarian commentary ever generated.

09 Immediate Next Steps

The following actions are required **before any development begins**:

When	Task	Detail
Week 1	Choose translation source	Research Gita Press, Swami Sivananda, Eknath Easwaran — pick one based on license and tone
Week 1	Engage a scholarly advisor	Identify a Sanskrit scholar or Vedanta teacher willing to review AI outputs and guide tone policy
Week 1	Document interpretation stance	Write a one-page policy: what MysticAI will and will not claim about meaning
Week 2	Prepare the corpus	Clean all 700 Gita verses into structured JSON: chapter, verse, Sanskrit, transliteration, translation, theme tags
Week 2–3	Build MVP	RAG pipeline + simple chat UI + system prompt guardrails enforcing citation and descriptive tone

Week 4	Internal testing	50 sample questions; check citation accuracy; scholar review of a sample of AI outputs
Month 2	Beta launch	20–50 real users; collect structured feedback; iterate on retrieval quality and UX

"Yoga is the journey of the self, through the self, to the self."

— Bhagavad Gita 6.20
